

V ULTRA LIFE

PRESERVATIVE FOR MEMBRANES

COMPOSITION

V ULTRA LIFE is a liquid product based on organic acids.

APPLICATIONS

V ULTRA LIFE is a specific product for the treatment of separation membranes in the food and water treatment industry. It's particularly suitable to be used on organic polymeric membranes.

DIRECTIONS FOR USE

V ULTRA LIFE has to be used by pouring it in cold water at concentrations from 0,5 to 2%. After washing and membranes' regeneration, fill completely with V ULTRA LIFE. This treatment allows a wet storage of the membranes in an environment hostile to the proliferation of microorganisms. For its acid characteristics, it can be also used for the removal of inorganic acids. For filling periods longer than 15 days, we recommend to change periodically the solution.

PACKAGING

20 kg drums.

STORAGE

Keep the product well closed in its original package.

HAZARD

Based on the current European regulations the product is classified: hazardous (see MSDS).

CORROSIVE ACTION

V ULTRA LIFE does not corrode plastic, ceramic or glass.
